*within the disk space and data transfer limit on the plan you signed up for. Enterprise and customized plan/s also available.

Top Level Domain Registration (.COM, .NET, .ORG) @ Php 800/yr | (.PH) @ Php 3,500/yr
Google Apps Integration (includes 7GB mailbox, web mail, etc.) @ Php 1,500 One-time Fee

All plans include the following features

Backup

- Backup & Restore

Mail

- Manage email accounts
- Webmail
- Auto-responders
- Custom mail filtering
- Forwarders
- Mailing lists (mailman)
- Ability to modify an MX entry
- Spam filtering (SpamAssassin)

Stats

- Webalizer WEB/FTP stats
- View latest visitors
- View bandwidth usage
- View error log
- Download raw log file

FTP

- Manage FTP accounts (add, remove, change password)
- Anonymous FTP controls
- Ability to change FTP login message
- Ability to kill FTP sessions

Site Tools

- Web Protect (.htaccess editor)
- Ability to change site password
- Custom error pages
- Redirects
- Ability to edit MIME types
- Ability to edit Apache handlers
- File Manager

Subdomains

- Ability to add/remove subdomains
- Subdomain redirects
- Stats for subdomains

Advanced Tools

- SSH access
- Manage GPG keys
- Cron jobs

Pre-Installed CGI Scripts

- Interchange Cart
- Agora Cart
- Bulletin Board
- Java Chat
- HTML Chat
- phpMyChat
- CGI Wrapper (for non-suexec installs)
- Random HTML generator
- Advanced Guestbook
- Counter Generator
- Java Clock Generator
- Java Countdown Generator
- Secure FormMail clone
- CGIEmail
- Entropy Search
- Entropy Banner

Network Tools

- DNS lookup
- Traceroute

Database Management

- Manage MySQL databases
- phpMyAdmin access

:: Our Technology & Network ::

MyIntellects Web network has been designed to accommodate clients demanding the highest quality network performance. There is a central focus on redundancy allowing our network to rapidly self-heal failures without interruptions to connectivity.

Our redundancy is multi-tiered with N+1 internal device elements as well as entirely redundant chassis allowing any routing device to fail without interrupting client data connectivity. All core routing and switching equipment is state of the art Cisco.

Tier-1 Premium Bandwidth Providers

Providing the highest quality Internet connectivity and performance is our top priority. We have selected premium Tier-1 bandwidth providers, ensuring minimal latency and fast connections to all points of the global internet.

We are proud to feature direct connectivity with AT&T, Verizon, Sprint, Savvis and Level3. Our aggregate connectivity reaches an astounding 8,500+ networks just a single network away from our uplinks.

The technology that drives our web hosting services is enterprise-grade and meticulously maintained. Everything you want to know (and more) is below.

- Dual Quad Core Intel Xeon L5300/L5400 / Dual Quad Core AMD Opteron 2212 Series CPUs
- 32 GB 667 MHz DDR2 Dual Rank, Fully Buffered RAM
- 15K RPM SCSI/SAS Hard Drives in RAID 10
- Zero Downtime During Drive Failure
- Hot-Swap Drives and Fans
- Dual Gigabit Network Interfaces
- Modern, up-to-date CentOS Linux Operating System
- Proprietary systems to proactively and automatically monitor and provide reliable server performance
- Completely redundant network--no single point of failure
- Fully redundant border routers and distribution switches
- Over **20 GB/s** of available bandwidth from Tier 1 transit providers
- Custom-written monitoring systems for all inbound and outbound network traffic
- Restricted site access with closed circuit security camera surveillance, biometric fingerprint and facial recognition
- Auto-activated UPS with permanent standby diesel generator with indefinite run time secured by refueling service contracts
- On site level III network and systems administrators
- On site equipment warehouse for rapid hardware repairs
- 99.9% Uptime Guarantee

If you have any questions about our technology or suggestions for future enhancements, please feel free to contact sales@myintellects.com.
